**Home Access:** All Users

Multiply your math smarts! When joining equal groups together, multiplication is the way to figure out how many in all. In Multiplication, kids learn the ingredients in multiplication number sentences -- factors, products, multiplication signs and equals signs -- and master multiplication tips, including ordering factors, fact families, multiplying by one and zero, skip counting and using patterns. Physical arrays of everyday objects, place value blocks and hundreds charts help students easily visualize and solve multiplication problems. The concepts of prime and composite numbers are explored using factor rainbows, and kids experiment with different strategies for multiplying single- and double-digit numbers. Part of the multivolume Math For Children Video Series. A Teacher's Guide is included and available online.
